(57) **ABSTRACT**

A dual screen display system having, a base, a pair of electronic display screens, an arm assembly supporting the display screens and connected to the base, swingable mountings for swingably mounting the display screens, the mountings being adjustable as to the angular orientation of each of the display screens relative to the arm assembly between a first arrangement with the screens in a common plane, and a second arrangement in which the screens are inwardly swung positions thereby to permit each of the screens to be swung into desired operative angular orientation, and adjustable movement limiting devices, engaging the swinging mountings and limiting movement of the screens. Also disclosed are interchangeable mounting brackets for mounting screens of varying sizes, or for mounting screens in various configurations, and hingeable and rotatable support members for supporting the screens so the screens are swingable to face in opposite directions. A modular display system is also disclosed which allows a one, two three or four display panel system to be formed.
